IPM 2026/27 · Handout 04 · More sketches, refinement and the first panels

Session S4: Tuesday 13 October (P1, P3) and Friday 16 October (P2). Álvaro Figueira, Diogo Abrantes.

What this session produces. New sketches from every member, an updated choice of the group's best ideas, one refined sketch per member, and the first panels of the dashboard, each with its information zone and its action zone.

Start of the session

Elect today's team leader (someone new) and open today's section in the group document. Put on the table the sketches, the scoring table and the list of panels from S3. Each member brings at least five blank A4 sheets, a pen and some post-its. Pen on paper only. AI may be used to explain a concept, never to create an idea for the interface.

Tasks

Task 1 · 25 min · Sketch alone. Three new sketches each, pen on paper, one sheet per sketch. Start from the three ideas the group kept in S3 (the top of the scoring table). Sketch 1 takes one of those ideas further. Sketch 2 combines two of them. Sketch 3 is free. On each sheet write your name, a number that continues from S3 (Ana-4, Ana-5, Ana-6) and a title. Keep the sheets face down until Task 2.

Task 2 · 20 min · Score and choose. Turn all the new sketches face up. Score them with the group's heuristics from S3, in a new shared table drawn by the team leader: one column per member, nobody scores their own sketches, no discussion while scoring. Aggregate as the group did in S3 and rank old and new sketches together. The three highest are now the group's ideas. Write them in one line in the group document.

> **[~9:55] Quick round.** Each group says how many new sketches it made and how many of its three ideas changed.

Task 3 · 20 min · Refine alone. The team leader gives each member one of the group's three ideas (every idea goes to at least one member). Redraw it on a clean sheet with more detail: a label on every element, units and example values, and the states of each control (a gate can be closed, opening or open). It stays a sketch, pen on paper.

Task 4 · 25 min · The first panels. Put the refined sketches on the table. Write every element they show on a post-it, one element per post-it (a level, a graph, a gate command, an alarm). Group the post-its by logical function: elements that serve the same purpose for the operator go together. Each group of post-its is a panel, with a name. Inside each panel, keep the information zone (what the operator reads) apart from the action zone (what the operator operates). Then, on one sheet per panel, draw a frame with the two zones and the names of the elements inside each one. A panel is one area of a screen dedicated to one subject.

> **[~10:45] Quick round.** Each group says how many panels it has and the name of one of them.

Task 5 · 3 min · Close. The team leader writes in the group document what to change next session, and one member photographs the new sketches, the scoring table, the refined sketches and the panels.

For the next session (S5, 20 and 23 October)

Bring everything made today: the new sketches, the scoring table, the refined sketches and the panels.
